Article number 803386

ACCESSORIES

High demands are placed on system chairs. They must be comfortable and safe to sit in, whilst allowing easy movement of the user. In order to be able to adapt the chair to the user, a broad range of options and accessories is necessary. REAL 9000 is a chair system that uses a modular construction to allow for simple and individual adaptation. Due to the REAL chairs many options and accessories, the user can choose the necessary adjustments for the task at hand.

Freedom of choice

An individually adapted chair makes it easier to live an active life at home and in the workplace. Varying seat and backrest angles, seat sizes, different wheels, manual actuators, electrical actuators and a number of different accessories may be chosen.

Base

The base is available in several variants in order to satisfy different needs. Our clinic chair base even comes with a built-in attendant foot brake making it easier to stop without having to reach forward for the brake lever.

The versatile PLUS-BASE gives extra space for your feet and extensively simplifies the possibility of movement while seated in the chair.

An H-BASE gives extra space for your feet and leg supports. The leg supports is preferably to be mounted on H-base and may be complemented with calf and knee supports.

Foot ring

The foot ring serves as support for the feet and makes it easier to maintain an upright posture. The support is easy to fold up or down to match individual requirements, for example when feet need space for transporting. The up-foldable foot ring is available as two models and suitable for all REAL 9000 chairs with Plus base.

Base extender

A base extender provides the chair with increased stability and prevents it from tipping. This is a useful option if the user suffers from spasticity.

Brake lever

Brake levers are available in various lengths, and may be placed on either the right or left side. A rheumatic cross can be mounted on the brake lever to simplify braking for people who normally find it difficult to reach the brake lever. Electric brakes are also available.

FOR INDIVIDUAL ADAPTION

Castors

The XL-WHEEL 100 mm is standard, and is best suited for linoleum and medium-hard floors.

The SL-WHEEL rolls very easily, and has double bearings and works best on hard floors such as parquet and concrete.

The BSL-WHEEL is a SL-WHEEL. It rolls very easily, and has double bearings and works best on hard floors such as parquet and concrete.

125- and 150 MM WHEELS are well suited for manoeuvring both thresholds and boardwalks.

Adapters

Adapters are available for wheelchair leg supports: Cross, Adapt, Spinner and Orthopedia, all mounted on the armrests width adjustment arch.

Calf supports

The calf support functions as an extra support for the calves when the leg supports aren't enough to stabilize the legs. The calf support is available in different models depending on the leg support it is easily mounted on.

Leg Support Medic

Leg Support Medic with whole or divided footplate is available in four sizes: S, M, L and XL. They are height, angle and depth adjustable.

Middle-mounted Mobil leg support is available for adults and children.

Leg supports are primarily mounted on H bases, and may be complemented with calf and knee supports.

Knee supports

Rectification of legs and feet can be done with adjustable knee supports. Knee supports can be regulated into the length of the user's legs and they prevent the user from gliding forward in the chair. The knee supports are mounted onto Medic leg supports and can be pulled out and adjusted in height and depth.

SEATS & SEAT ANGLES

Seats

The biggest requirement of the seat is to be stable and comfortable. For optimal sitting comfort, the ERGOMEDIC® seats have the right form and softness to ensure optimal stability and comfort, higher at the thigh than the buttocks. Its form distributes pressure evenly and effectively, and prevents the user from sliding forward when the seat is angled.

ERGOMEDIC® PLUS seats have the right form and softness to ensure optimal stability and comfort, higher under the thigh than the buttocks. The higher rounded shape on either side of the thighs means that both the pelvis and the legs are stabilised.

The coxist seat is divided with individually adjustable flaps. It is used primarily for the alleviation and rehabilitation of orthopaedic injuries to hips or thighs.

ERGOMEDIC SLOWRECOVERY seats are manufactured with two materials in the cushioning, the upper layer comprises of a memory foam that moulds itself and provides good pressure distribution and increased sitting comfort. The lower layer raises the seat bone nodules from the wood plate.

Contact Mercado or view the brochure 'Seatsystems' for more information.

Seat angles

Mercado's gas springs and electric-controlled angles can be placed in more locations than just under the seat or armrest. When the seat is tilted, the backrest follows the seat angle and supports the back even when tilted. Contact us for additional alternatives that suits your or your user's needs.

CRANK SEAT CONTROL, operated by carers, with an adjustable crank adjustment that can be locked into position. This can be used when gas-spring controlled seat angling is not practical. Crank adjustment is suitable for ortho-pedic clinics where patients should sit at a specific angle, or in school environments for children who need to sit in an active position.

GAS-SPRING CONTROLLED SEAT ANGLE under the seat - the users can easily adjust the seat angle position for themselves for active and passive sitting.

When the GAS-SPRING CONTROL is placed under the arm-rest it also facilitates standing up from a seated position when the seat is in the forward angled position.

ELECTRIC CONTROLLED SEAT ANGLE under armrest is easily accessible for users, and is simple to set in a fixed position. This is a good alternative for users who are unable to adjust their centre of gravity.

BACKS & BACKREST MECHANISMS

Backs

The ERGOMEDIC backs shape and angle of the high back has been improved to create more space for the pelvis and its softer parts. The lower edge of the back panel now has a gentle 'U' shape and is softer.

The ERGOMEDIC® PLUS back is available in several variants. The higher backrest provides more shape around the pelvis and thoracic spine. At the top in the centre, between the shoulder blades, a soft extra support has been integrated. This to enable the user to sit upright and stable against the backrest, whilst at the same time leaving enough room for free movement of the shoulders. The high backrest is also available with extra side wedges.

The low backrest has a similar shape to the high one, but is designed for supporting the pelvis and lumbar spine.

Contact Mercado or view the brochure 'Seatsystems' for more information.

Backrest mechanism

MEDIC BACKREST MECHANISM provide the option of increasing the seating depth in a more effective manner than with a standard backrest mechanism, this is necessary if the user is severely kyphotic.

In order to keep the user's head up, the back rest is adjusted to a backwards leaning position, and the back plate angled

to provide the best possible support so that the user's upper body is prevented from falling forward.

The advantage of the Medic backrest mechanism is that the angle adjustment is located on the lower edge of the back plate meaning that angle-adjustment of the back plate does not limit seat depth, and also provides back support. It automatically centers the user from the side because the back support is distributed along the width of the back along the bottom edge.

The COMFORT BACKREST MECHANISM can be adjusted in height, depth and angle by using the gas-spring control. The backrest becomes yieldingly soft, and the user can change seat depth themselves whilst sitting in the chair.

LOW BACKREST is an ergonomically correct back plate that provides good support for the lower back, and supports the curve in the small of the back. The low backrest allows for extended freedom of movement in the upper body.

HIGH BACKREST provides even more support and stability, especially upwards, but is not so high that upper body and shoulder movement is restricted. The high backrests are also available with extended lower back support.

EXTRA HIGH BACKREST provides good lower back support and back plate support higher up in the central back area (between the shoulder blades). The backrest tapers off at the top so that shoulder blades are not impeded in work situations.

ARMRESTS & ARMREST MECHANISM

Armrest mechanism

ARMREST MECHANISM 9000 PLUS is adjustable in height. They can be lowered totally, so that movement sideways is possible for the user.

ARMREST HEMIPLEGI 9000 PLUS is suitable for users with one-side paralysis. The mechanism makes the armrest pivotal sideways for best possible positioning and it is possible to lock the Hemiplegi mechanism in a certain position.

ARMREST MECHANISM 6100 exist as both angle settable and non-angle settable. The user may adjust the armrest in height and width him/herself. The shedable armrests can be tilted backwards, which makes movement sideways possible in an easy way.

ARMREST MECHANISM 6100 HEMIPLEGI originate when the armrest mechanism 6100 is completed with the hemiplegi mechanism for shedable armrests (nr 58).

In this case the operation results in an angular adjustment to the side.

Armrest

The armrest is an extremely important part of the ERGOMEDIC system, so we have also developed these to be more ergonomic and comfortable. The edges have been beveled, both on the inside and the outside to minimize the pressure against the underarms during prolonged contact. The armrest panels are hollowed out at the back in order to stabilize the elbows. At the front they have been designed to provide a good grip when standing up and transferring pressure.

The COMFORT armrest is a slightly wider arm support with softer stuffing, which allows the user to easily rest their arm on the armrest.

The HEMIPLEGI armrest is suitable for partially paralysed, or users with restricted control. The armrest panel has been hollowed out, which makes it easier to keep the paralysed arm on the rest. The armrest panel also rotates, which allows for the best possible position.

The ERGOMEDIC® PLUS armrests are shaped so the arms are supported from the sides, which means that the upper body is more relaxed. They are also raised beneath the wrists to provide extra relief.

MANY ACCESSORIES PROVIDE INCREASED FLEXIBILITY

Trunk support

Trunk support is used in order to achieve a more upright and active sitting position.

Mercado has three types of trunk support: Height and depth adjustable trunk support, straight trunk support and curved trunk support.

Hip belt

A hip belt eliminates the risk of the user falling forward from the chair. It is available in sizes S 51-71 cm, M 68-83 cm and L 83-103 cm.

Amputation support

The Amputation support helps keeping the leg in the right position and is designed to be comfortable for the amputated leg to rest in. The amputation support is available for both legs and it is mounted with a fastener under the seat.

Leg divider

A leg divider is used when wanting to prevent the knees from being in contact with each other. The leg divider provides with increased stability and sitting posture. A leg divider is available in two sizes, 11 cm and 15 cm. The mechanism for the leg divider is available in 3 lengths, Child - 57 mm, Adult - 115 & 175 mm.

Table

A smoke coloured transparent lamina with side edges. The table is tip-up and compatible with the REAL 9000 programme. The measurements are 60x45 cm and mounts on the right armrest.

Tray

A tray for unloading. It is made out of wood and has the measurements 45x30 cm. The tray turns sideways and can be mounted on optional side of the chairs armrests. This product is also compatible with the REAL 9000 programme.

■ The accessory is also suitable for REAL 6100

UPHOLSTERY DETAILS & ELECTRIC CONTROLS

Neck support

Neck support provides support to the head in order to obtain the best seating position, as well as to provide relief for the neck and back when trunk control is poor. It can easily be adjusted to obtain the optimal setting. Available in flat, curved and ErgoMedic PLUS cushions.

Side supports

Side supports help the user maintain stability and position. When used for thigh support, feet are better supported on the footplates or floor, and it prevents legs from sliding apart. It can be adjusted for height and width, or turned backwards. Available in four sizes: XS, S, M and L.

Seatraising/Seatlowering

Seat raising and lowering controls can be placed under the armrest, on the backrest with an attachable box or be controlled by a joystick. A Remote control is also available for use in clinics.

Electric brake

Electric brakes facilitate braking for users that have problems using manual brake levers. For the electric brake there is a red button located on the outside of the electric lifting control under the armrest. A single push of a button can take care of the entire braking procedure.

Upholstery

The chair is delivered in plush, skai or patterned fabric in a number of colours, all of which are machine washable.

Covers

The covers protect the upholstery from dirt and dust, as well as extending the chair's lifetime. Covers are available in different colours for a variety of combinations. Incontinency covers are a quick and easy solution to protect seats against moisture.

Visit www.mercado.se or contact Mercado for more information on the covers.
