CERTIFICATE OF COMPLIANCE

Regarding UN2800 standard, class 8, sub paragraph 3 , relative to Wet, Non Spillable Electric Storage Batteries.

We hereby certify that all Fiamm-GS brand batteries of the FG, FGC, FGH and FGHL series are Sealed Valve Regulated Lead Acid batteries (VRLA) with Absorbed Glass Mat (AGM) and as such have been tested according to the Vibration, Pressure Differential and Attitude tests stipulated in Packing instruction 806 and special provision A67 (pg.251) of the **IATA Dangerous Goods Regulation**.

All tests samples passed each an every one of these tests.

Being such batteries of the non-spillable type, the electrolyte will not flow from a ruptured or cracked case and there is no free liquid to flow and, when packed for transport, terminals are protected from short circuit.

We can therefore categorically state that all above mentioned batteries are not to be considered dangerous goods and can readily be safely transported by Air, besides of Road and Sea.

Elie Perez
